

HOW TO SECURE YOUR SNAPCHAT ACCOUNT

How secure is your
Snapchat account?

On the Snapchat Application you need to access this page.

(Click your image in the top left of the camera home screen.)

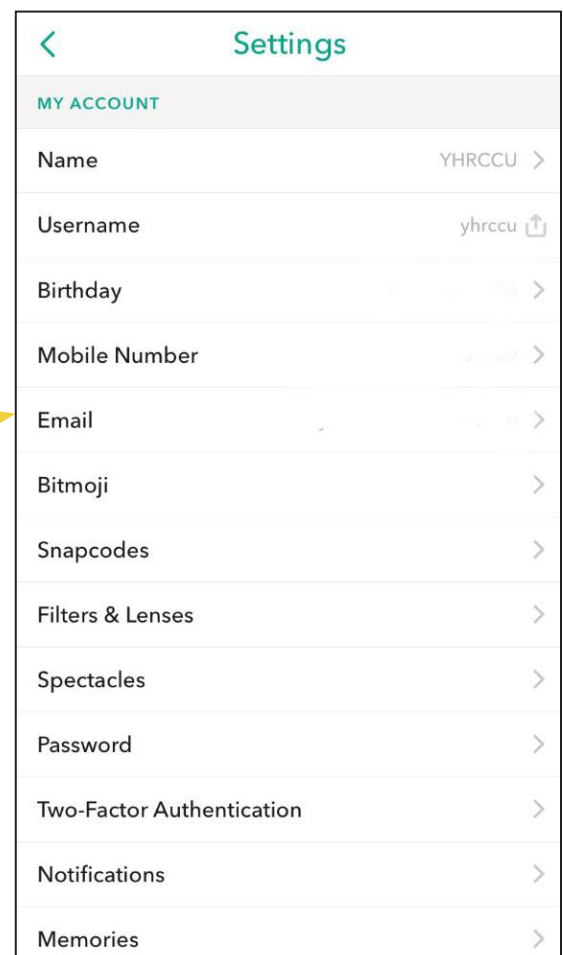

Here you can add friends or add a snap to your story!

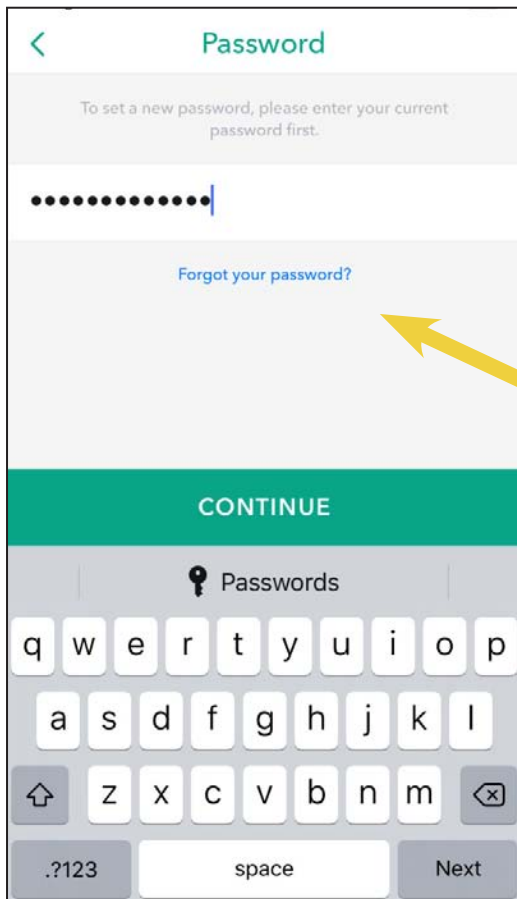

Click on the settings icon in the top right corner.

Here is the settings page.

Each section has an arrow allowing you to click and open each setting to make further options.

You can edit your personal data and a variety of security settings available for your account.

Password

Find **Password** in the settings menu!

Firstly to set a new password you must enter your current password.

If you have forgotten your password and wish to reset while you are still able to access your account, then click 'Forgot your password?'

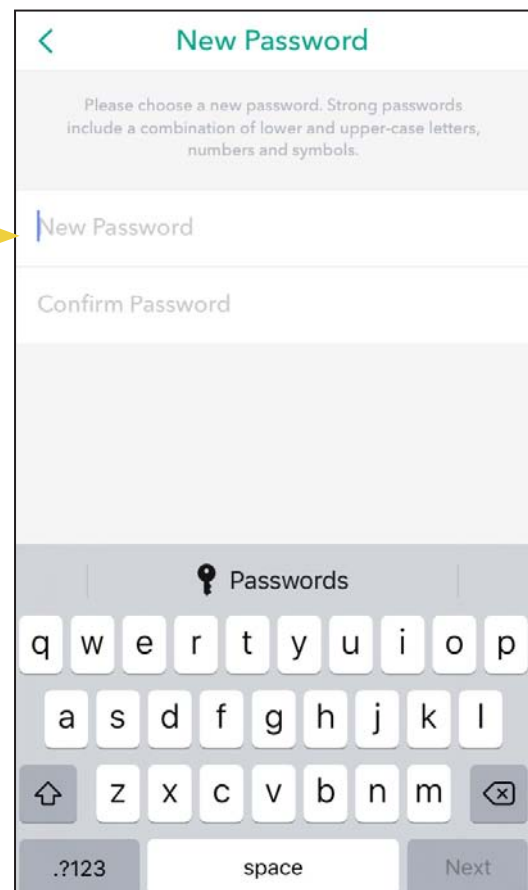

You will be required to enter your email address which a reset password link will be sent.

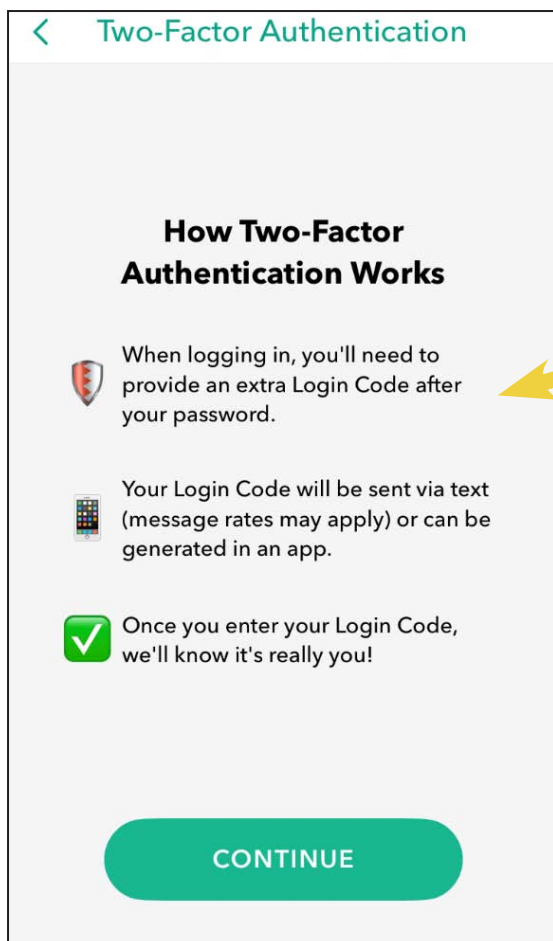

Enter your new password and confirm it by entering the password a second time.

Press next – at the bottom right of the keyboard when completed

Don't share your password with anyone else! Consider using a password manager and check the strength of your password at 'How secure is my password'

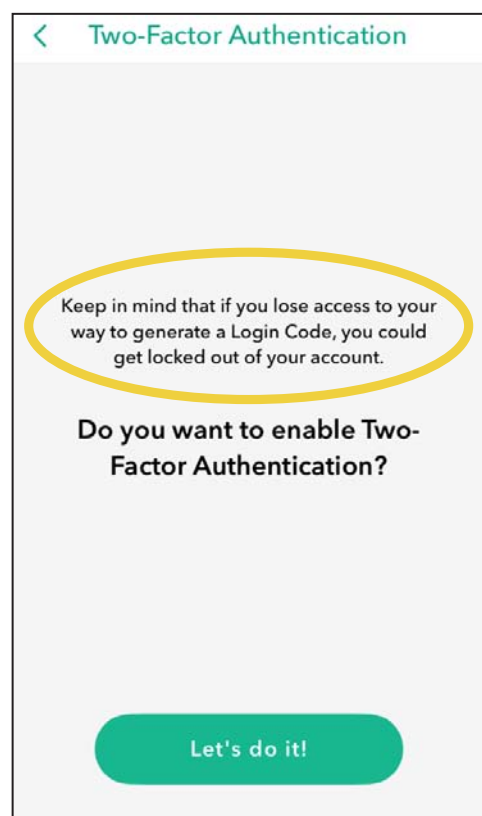

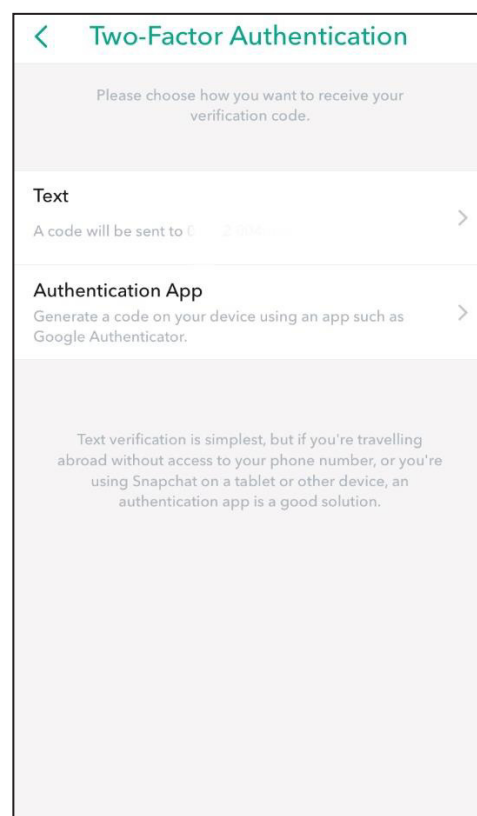

Find **Two-Factor Authentication** in the settings menu!

You can set two-factor authentication. This means you will need to provide an extra login code after you have entered your password.

Click 'continue'.

Click 'Let's do it!' once reading the information on the screen. You will then have to choose how you want to receive your code. By text or authentication application.

< Two-Factor Authentication

We've sent a verification code to +447872004689.
Please enter it below. If this isn't your number, [you can change it.](#)

0000000

CONTINUE

1	2 ABC	3 DEF
4 GHI	5 JKL	6 MNO
7 PQRS	8 TUV	9 WXYZ
0		< X

For this example the code has been sent in a text.

The code has been entered and 'continue' was clicked.

The following screen approves the code and allows you to set up an authentication app if you require.

< Two-Factor Authentication Skip

You're all set!

You can also generate Login Codes with an authentication app! These are more secure and can generate codes even when you can't receive text messages - such as when you're travelling abroad.

Set Up Auth App

Recovery Code Next

Save your Backup Code!

Keep this Backup Code somewhere safe! If you can't generate a Login Code, you'll need it to log back into your Snapchat account. Without it, you could be locked out for good!

SAVE SCREENSHOT

COPY TO CLIPBOARD

Save the backup code because if you cannot generate a login code you will need the backup code to log back in.

This is the two-factor authentication page.

It shows we have set up text verification, allows us to access our recovery code and set up an authentication app when required.

< Two-Factor Authentication

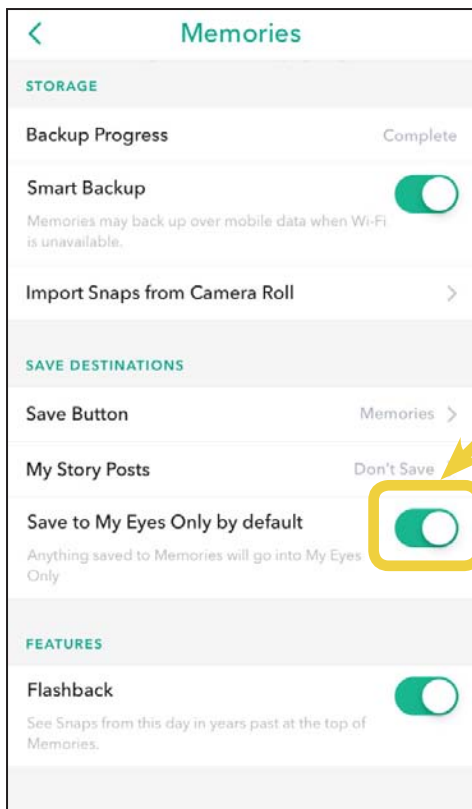

With Two-Factor Authentication enabled, you will need both your password and a verification code to log in on new devices.

Text Verification ☒
A code will be sent to 07

Authentication App ☐
Generate a code on your device using an app such as Google Authenticator.

Recovery Code ☐
Generate a recovery code so that you can log in on new devices if you change or lose access to your phone number.

Forget Devices ☐
Lose access to one of your verified devices? Forget it!

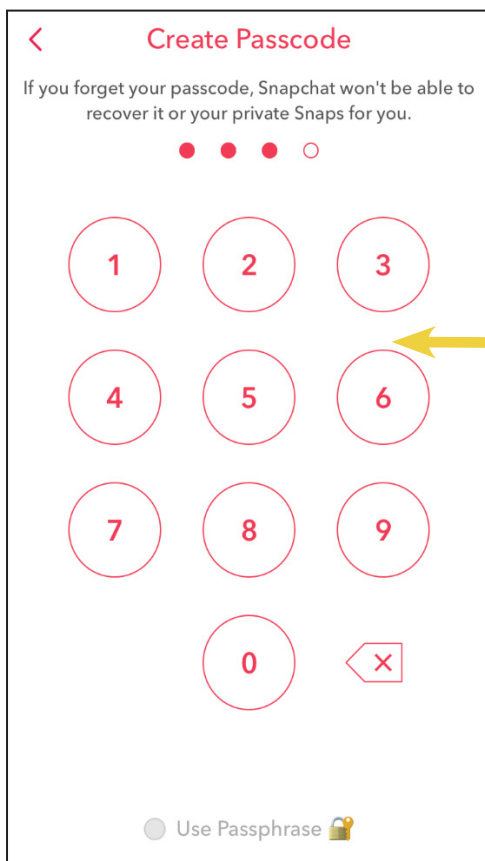

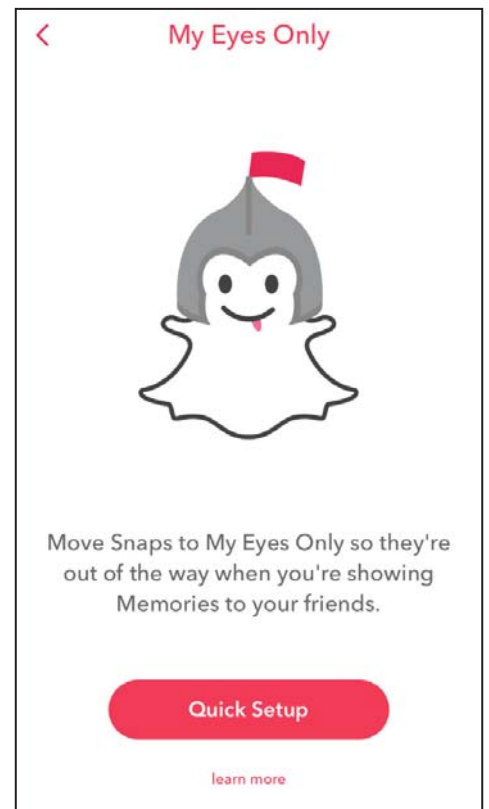

Find **Memories** in the settings menu!

Try and ensure you save your snaps for your eyes only!

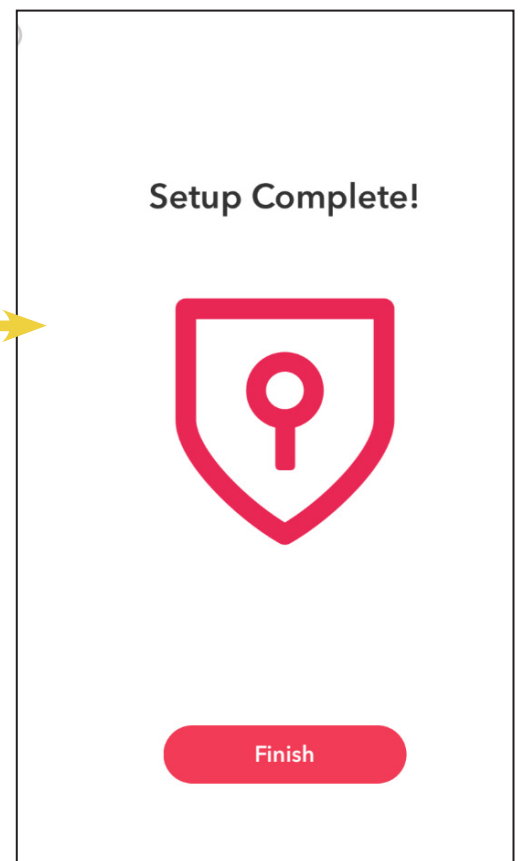

The switch must be green to be activated.

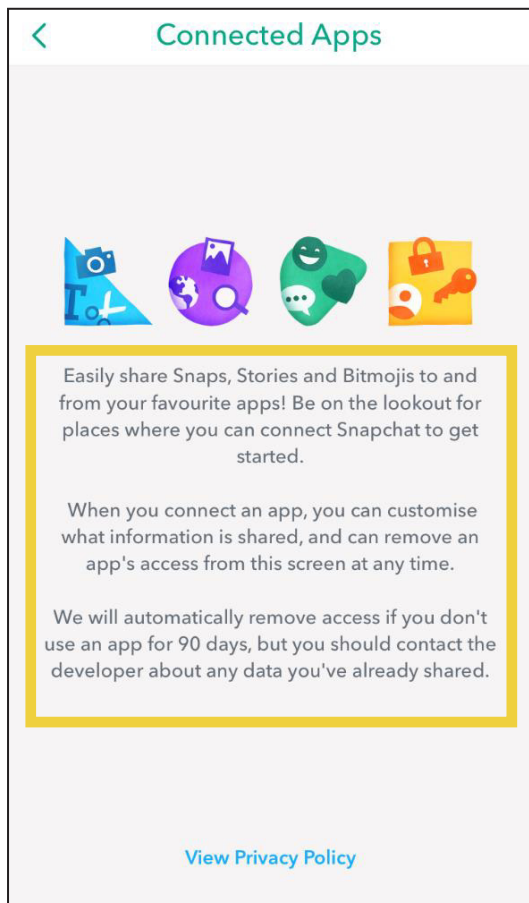

You will be taken to the quick setup page. Click 'Quick Setup'.

You will be asked to create a passcode 4 characters long.

The setup will be complete and click 'Finish'.

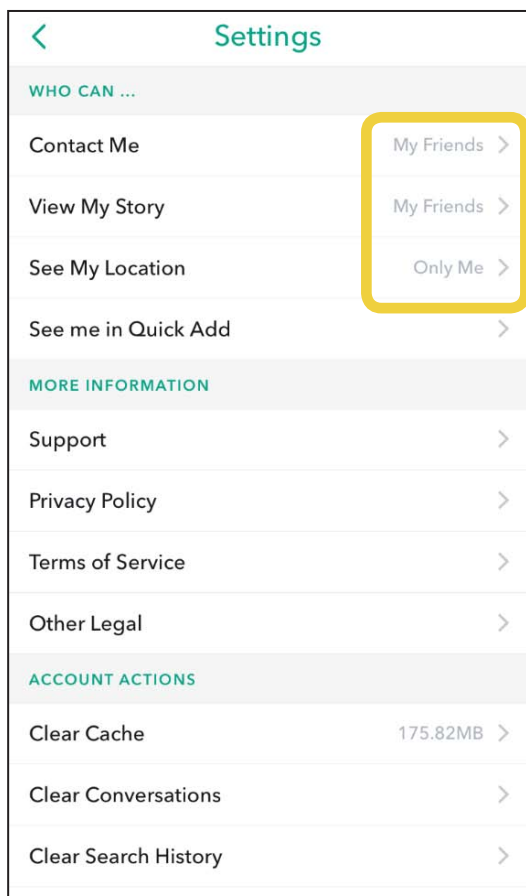

Find **Connected Apps** in the settings menu!

Check the apps which are connected to your snapchat!

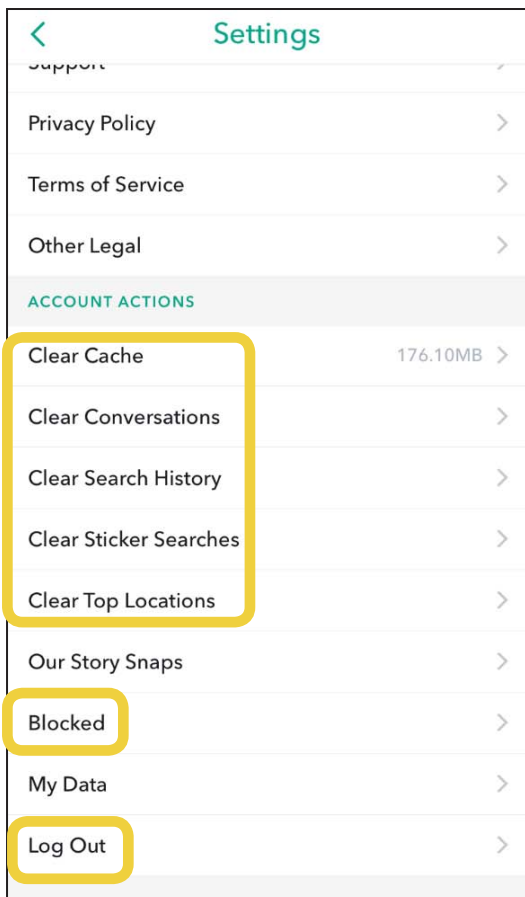

Some applications may have access which you were not aware.

There are further IMPORTANT options in the settings menu.

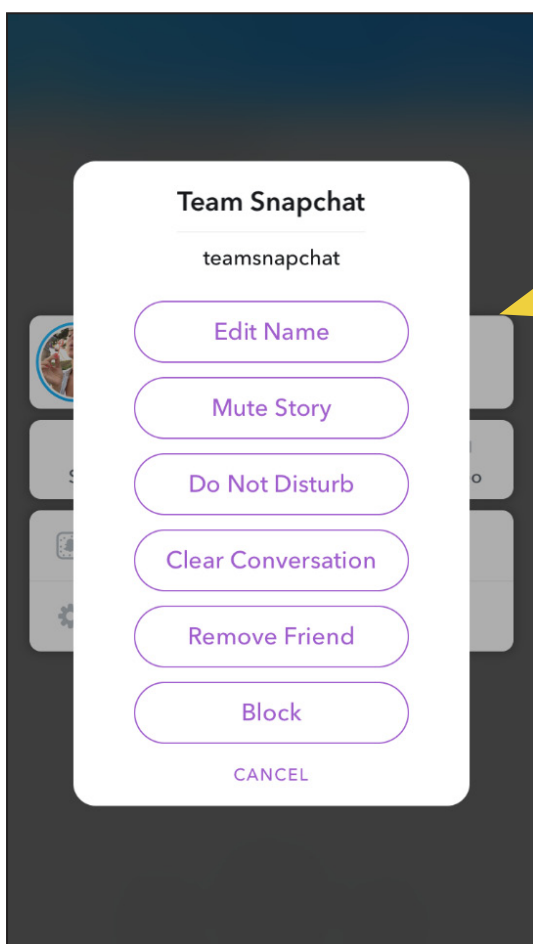

Our suggestions for snapchat security are to only allow 'My Friends' to contact and view your story.

We also advise for your location settings to be 'Only Me' only yourself can view your location at any time.

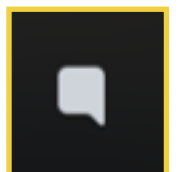

You may also wish to clear conversations or your browsing data.

You can check the snapchatters who you have blocked or even log out of your account.

If you revisit the home screen (camera) then click the chat button.

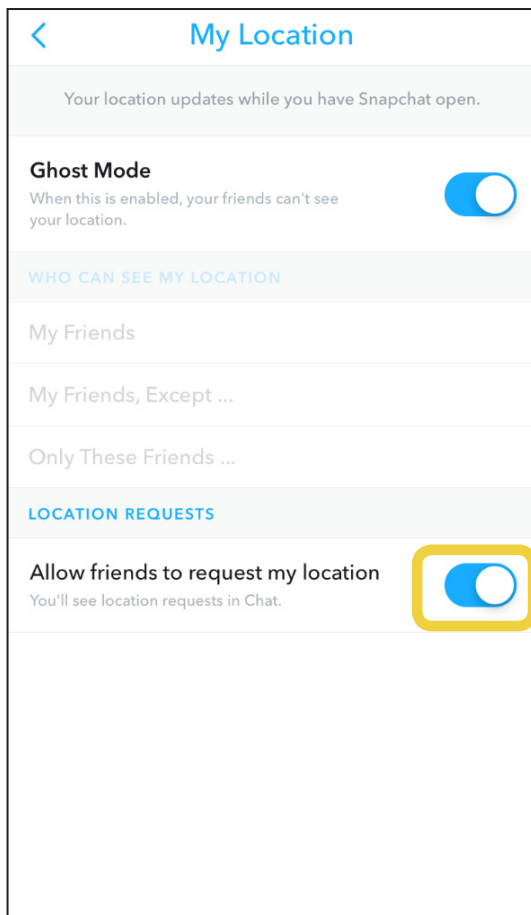

Click and hold on a name to reveal their information, press the settings option for more.

The following options are available- including Block.

You can remove blocked contacts in the blocked section in the main settings.

We suggest for you to check your location settings in the settings menu.

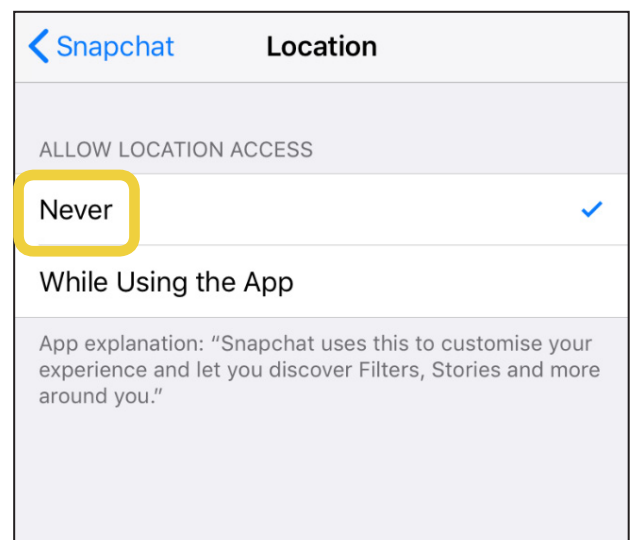

You need to check who can see your location! People may be able to see your exact location depending on your settings.

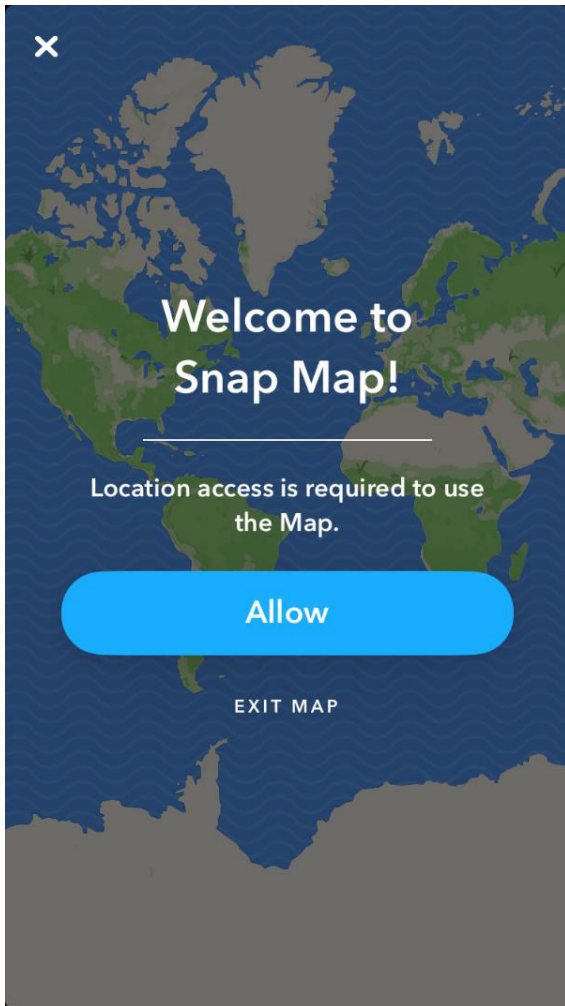

We suggest you put location onto 'Ghost Mode' therefore no one can see your location.

You may wish for family or close friends to see your location therefore you can allow requests.

iPhone Only:

in the settings menu find Snapchat application settings. The location option also appears whereby the application itself records your location. We suggest you choose 'Never' but you may allow 'While Using the App' depending on your own preferences.

There are **three ways** to access Snap Map:

- 1) Un-pinch your fingers as if you were zooming out from the Camera, Friends or Discover screen.
- 2) Tap the **Q** button at the top of the Camera, Friends or Discover screen, then tap the Map!
- 3) Tap a Map Story on the Discover screen.

Below are screenshot examples of the kind of information which can be displayed. When your friends allow you to see their location you can click on them and it will tell you when they were
